

Costs and Limitations of Certified Health IT

Horizon Clinicals®

General Costs

Horizon Clinicals® requires one-time training and implementation fees which cover certified capability education if implementing capabilities after initial installation, enabling and validating interoperability features including Direct Messaging and Horizon Connect™ 2014 Edition for patient online access, and HL7 public health reporting interfaces. Fees for public health interface training and implementation vary based on the number of interfaces. Furthermore, one-time training and implementation fees apply when enabling clinical quality measure reporting. Annual subscription fees apply for ongoing use of Horizon Connect, Direct Messaging, McKesson Quality eMeasures™ for Hospitals for clinical quality measure reporting, and the FDB Interoperability Module™ which enables FDB to RXNorm mappings for medication content standards. The customer must sign a contract to purchase and implement Horizon Clinicals, and the use of Horizon Connect requires use of the RelayHealth HISP.

Contractual Obligations

Change HealthCare will continue to offer support for the McKesson Quality eMeasures™ for CQM reporting period for CY2017. As this product is retired at the end of the electronic submission period for CY2017, Hospitals will be unable to use McKesson Quality eMeasures™ for any of your eCQM reporting needs for dates within the CY2018 reporting period. Customers will need to refer to your master agreements and any correspondence you have received regarding the applications and the discontinuation plans.
